Abstracts

The automatic enzyme-linked immunosorbent assay (ELISA) cleaning machine is a medical device used in the laboratory for cleaning and processing microplates used in ELISA. ELISA is commonly used in medical research and diagnostic testing to detect the presence of specific proteins or other molecules in patients' blood or other bodily fluids. After conducting ELISA, the microplates used in the assay must be cleaned and treated to remove any unbound reagents and prepare microplates for further analysis. The automatic enzyme labeling washing machine aims to automate this process, making it faster and more efficient than manual washing methods. To use an automatic enzyme labeled washing machine, the technician places the microplate into the washing machine and selects the appropriate washing program. Then, the machine uses advanced washing technology to remove any unbound reagents from the microplate without damaging the bound reagents or the microplate itself. The automatic enzyme label cleaning machine is designed accurately and reliably, and is usually used in medical laboratories and research facilities to quickly and efficiently process a large number of microplates. It can help improve the accuracy and consistency of ELISA, thereby obtaining more accurate diagnosis and better patient outcomes. Overall, automatic enzyme-linked washing machines are an important tool for medical researchers and diagnostic laboratories who regularly conduct ELISA. It can help simplify the cleaning and treatment of microplates, making the ELISA process faster, more efficient, and more accurate.

The global Automatic Enzyme Label Washing Machine market size was estimated at USD 285.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
