Report Overview

Automatic expansion valve is also called constant pressure expansion valve. The automatic expansion valve (AXV) is similar in construction and appearance to the commonly used thermostatic expansion valve (TXV). However, the metering devices operate much differently. The AXV is a constant pressure regulator. It is designed and constructed to maintain a constant evaporating pressure. The flow of the refrigerant into the evaporator is based on the pressure of the refrigerant in the evaporator. As the pressure in the evaporator decreases, the valve opens and allows more refrigerant to flow through it. As the pressure increases, the valve closes and allows less refrigerant to flow through it.

The global Automatic Expansion Valves (AeVs) market size was estimated at USD 285.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
