Report Overview

At the automatic gate machine (AGM), the ticket inspector can read the two-dimensional barcode on the ticket through the two-dimensional barcode reading device, and the system will automatically identify the authenticity of the ticket and store the corresponding information into the system. At the same time, ticket inspectors can also use the handheld 2d barcode reading device to read the 2d barcode on the ticket. The handheld reader will automatically compare the information it reads with the data in its own database to identify the authenticity of the ticket. Using 2d bar code reading equipment to check tickets not only improves the work efficiency, but also avoids human error. The passage result light used by the automatic ticket checker is installed on the upper side of the middle part of the box. After the ticket is checked in, three colors represent the result of the check. The yellow indicator light indicates children's tickets and other special tickets. When passing, a buzzer will give out a short monophonic prompt. The exit of the ticket detector is opened by default and allowed to pass. Red indicator light means breaking the gate, following, ticket has been out of the station record, or the sign and track damage and other illegal error information, at the same time the buzzer issued a long sound.
