Abstracts

An automatic heat shrink wrapper machine is an advanced packaging device that uses heat shrink technology². It automatically wraps products with heat shrinkable film and then heats the film to make it shrink and tightly wrap the products¹. It consists of a conveying system, a heat shrinking system and a control system¹. The conveying system moves the products to be packaged to the designated position. The heat shrinking system generates high-temperature hot air through a heat shrinking furnace to shrink the film wrapped on the products. The control system, usually based on a PLC controller and a touch screen interface, monitors and controls the entire packaging process, enabling the setting and adjustment of parameters such as temperature, speed and time¹.

The global Automatic Heat Shrink Wrapper Machine market size was estimated at USD 462.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
