Abstracts

The driving factors of automatic high beam assist system (AHBA) mainly include the following points:

Traffic safety factors: When driving at night, turning on the high beam can provide a wider field of vision, reduce the risk of dazzling oncoming vehicles or vehicles ahead, thereby improving driving safety. The automatic high beam assist system can automatically switch between high beam and low beam according to external light conditions to avoid safety hazards caused by improper manual operation.

Energy efficiency factor: Automatic High Beam Assist switches the high beams on and off at the appropriate times, reducing unnecessary energy consumption. When meeting, overtaking, or when there are no traffic participants around, the system will automatically switch the vehicle's low beam to high beam to improve energy efficiency.

Technological progress factors: With the continuous development of automobile technology, the technical level of automatic high beam assist systems is also constantly improving. The system can more accurately detect external light conditions, oncoming vehicles and vehicles ahead, and more intelligently control the switching of high beam and low beam, thereby improving driving comfort and safety.

Policy support factors: Some national and regional governments have increasingly higher requirements for vehicle safety and energy efficiency, encouraging automakers and consumers to purchase and use automatic high-beam assist systems. Policy support provides impetus for the development of automatic high-beam assist systems.

The global Automatic High-Beam Assist System market size was estimated at USD 3305.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
