Abstracts

Automatic induction soap dispensers are devices that use infrared sensing technology to achieve contactless hand washing, aiming to improve personal hygiene and convenience. This device is usually equipped with a sensor that automatically recognizes and releases the right amount of hand sanitizer or soap when the user brings his hand close to the soap dispenser, avoiding direct contact between the hand and the device, thereby reducing the risk of bacterial transmission. Automatic induction soap dispensers are not only suitable for home bathrooms and kitchens, but are also widely used in public places such as shopping malls, restaurants and hospitals to improve hygiene standards and user experience. Many modern styles also have the function of adjusting the amount of liquid to ensure that the hand sanitizer is used for the best effect every time. In addition, some high-end models are even equipped with LED displays and sound prompts to further enhance the user interaction experience. As people's awareness of hygiene increases, automatic induction soap dispensers are gradually becoming an indispensable sanitary device in modern life, promoting the popularization and application of contactless technology in daily life. Automatic soap dispensers have shown great potential in improving personal hygiene and convenience, especially in the context of today's society's high attention to health and cleanliness, the value of this device has become increasingly prominent. Through contactless operation, automatic soap dispensers not only effectively reduce the risk of bacterial transmission, but also provide users with a more convenient and quick hand washing experience. This technology is particularly suitable for applications in public places, such as hospitals, restaurants and shopping malls, which can significantly improve hygiene standards and enhance the trust of customers and staff. In addition, with the development of smart homes and the Internet of Things, future automatic soap dispensers may be connected to other smart devices to achieve a more personalized and efficient hand washing experience, such as automatically adjusting the amount of hand sanitizer according to

the user's habits, or providing health advice through data analysis. Overall, automatic soap dispensers are not only an important part of modern sanitary facilities, but also a model for promoting the integration of public health concepts and technology, heralding the transformation and progress of future lifestyles.
