## Abstracts

Automatic Meter Reading (AMR) is an intelligent system that uses modern communication technology and data collection technology to realize remote automatic reading and monitoring of utility meters such as water, electricity, and gas. The system transmits the user's energy or resource consumption data to the central management platform in real time through sensors or communication modules installed on the meter, thereby replacing the traditional manual meter reading method. The automatic meter reading system not only improves the efficiency and accuracy of data collection, but also supports functions such as data analysis, anomaly detection, and remote control. It is widely used in smart grids, smart water services, and smart cities, providing important support for energy management, billing optimization, and energy conservation and emission reduction.
