Abstracts

An automatic picking system, also known as an automated order fulfillment system, refers to the use of robotics, conveyors, automated storage and retrieval systems (AS/RS), and software to streamline the process of retrieving items from inventory in warehouses or distribution centers. These systems can range from semi-automated solutions like pick-to-light or voice-directed picking to fully automated robotic systems such as autonomous mobile robots (AMRs) or robotic arms that identify, grasp, and transport goods without human intervention. By integrating sensors, machine vision, and warehouse management systems (WMS), these technologies enhance accuracy, reduce labor dependency, accelerate order processing times, and optimize space utilization. The core objective is to minimize manual handling, decrease error rates, and improve scalability in logistics operations, particularly in e-commerce, retail, and manufacturing sectors where high-volume, high-velocity order fulfillment is critical.

The global Automatic Picking System market size was estimated at USD 1435.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
