Abstracts

An automatic pour point tester is a specialized laboratory instrument used to determine the pour point of petroleum products, which is the lowest temperature at which a fluid retains its flow characteristics under prescribed conditions. This device automates the traditionally manual process of cooling a sample and intermittently tilting it to observe fluid movement, thereby enhancing accuracy, repeatability, and efficiency while minimizing operator influence and human error. It typically integrates refrigeration systems, precision temperature sensors, and programmable controllers to execute standardized test methods such as ASTM D5949, D6892, or D97, making it essential in quality control and specification compliance within industries including refining, lubricant manufacturing, aviation fuels, and crude oil trading.

The global Automatic Pour Point Tester market size was estimated at USD 25.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
