Abstracts

Automatic Recessed Filter Press is a type of industrial filtration equipment designed for solid-liquid separation, where the liquid is filtered through a series of recessed plates that hold a filtration medium, typically a cloth. The system is automatic, meaning it can perform tasks like cake discharge, press operation, and cleaning without manual intervention. During filtration, slurry is pumped into the press, and the filtrate passes through the filter cloth, leaving the solid particles behind in the recessed chambers. This equipment is widely used in industries like mining, chemical processing, and wastewater treatment for its ability to handle large volumes of slurry efficiently, producing a high-quality filtrate and dry cake.

The global Automatic Recessed Filter Press market size was estimated at USD 1109.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
