The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automatic Seismic Trip System (ASTS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Automatic Seismic Trip System (ASTS) is an intelligent control system that detects seismic activity in real time and automatically initiates shutdown or protection protocols for critical infrastructure. It is commonly used in power grids, nuclear facilities, petrochemical plants, and transportation systems. By using sensitive seismic sensors, the ASTS continuously monitors ground motion, and once a preset threshold is exceeded, it sends trip signals to cut power, stop machinery, or close safety valves. The system is designed for fast response, high reliability, and seamless integration with safety control networks, playing a vital role in preventing secondary disasters during earthquakes.

The global Automatic Seismic Trip System (ASTS) market size was estimated at USD 65.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
