Abstracts

Automatic shell core machines are industrial devices used in foundries to automate the process of creating sand-based cores for metal casting. These machines produce hollow, high-precision cores by injecting a sand-resin mixture into a pre-heated core box, where the resin binds the sand particles, forming a solid shell. Once the shell is formed and hardened, it is removed and used in the casting process to create complex internal cavities or shapes in metal parts. The automation in these machines enhances production efficiency, improves consistency, and reduces labor costs while ensuring accurate core shapes for complex castings.

The global Automatic Shell Core Machines market size was estimated at USD 739.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.30% during the forecast period.
