## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automatic Shingled Stringer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An Automatic Shingled Stringer is a machine used in solar panel manufacturing to connect individual solar cells into strings, which are then used in solar panels. Specifically, it's designed for "shingled" solar cells, where the cells are cut into strips and overlapped (shingled) to maximize surface area for sunlight capture and minimize spacing. The stringer automates the process of connecting these cell strips with conductive adhesive and then welding them together, creating a continuous electrical path.

The global Automatic Shingled Stringer market size was estimated at USD 486.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
