Abstracts

An automatic soft serve ice cream machine is a machine used to make quantities of ice cream for consumption. Soft serve ice cream machine may prepare the mixture by employing the hand-cranking method or by employing an electric motor. The resulting preparation is often chilled through either pre-cooling the machine or by employing a machine that freezes the mixture. A soft serve ice cream maker has to simultaneously freeze the mixture while churning it so as to aerate the mixture and avoid ice crystals. As a result, most ice creams are ready to consume immediately. However, those containing alcohol must often be chilled further to attain a firm consistency. Some machines, such as certain lower-priced countertop models, do require that the resulting mixture be frozen for additional time after churning is complete. The mass market dominates the global soft-serve ice cream machine market. Increased usage of mass-priced products among lower-middle and upper-middle class consumers has significantly boosted the growth of the soft ice cream machine market. The ice cream parlor segment dominates the global soft ice cream machine market. The ice cream parlor offers a variety of frozen desserts, including soft serve ice cream. Ice cream parlors can be found all over the world, ranging from small regional franchises to large international businesses. These stores attract a huge consumer base for soft-serve ice cream. Soft-serve ice cream is often used to attract crowds, and as the fan base continues to grow, so do the soft-serve ice cream options on the market. This is one of the major factors responsible for the expansion of the soft ice cream machine market. Apart from this, the increasing popularity of sorbet and frozen yogurt in the soft ice cream machine industry has forced vendors to opt for these soft ice cream machines. Soft-serve ice cream machines are becoming increasingly common as the food and beverage industry shifts its primary focus to greater automation and less manual labor. The soft ice cream machine market is benefiting from the increasing consumption of soft ice cream. The ice cream machine is more hygienic, saves time and effort, can

accommodate multiple flavors at the same time, and can easily meet the needs of consumers. Soft serve ice cream machines can be used for more than just making ice cream. Frozen foods such as yogurt and sorbet can also be processed through soft ice cream machines, thus expanding the market to more people.

The global Automatic Soft Ice Cream Machine market size was estimated at USD 601.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
