## Abstracts

Automatic Telescopic Door is a type of intelligent sliding door system designed to maximize opening width in limited spaces by using overlapping panels that retract in a telescoping manner. Unlike conventional automatic sliding doors, telescopic doors consist of multiple door panels that slide behind one another when opening, allowing for a wider entrance in narrow corridors or compact architectural layouts. These systems are driven by a motorized mechanism and equipped with motion sensors, safety features, and control units for seamless and secure operation. Commonly, automatic telescopic doors are employed in commercial buildings, hospitals, airports, hotels, banks, and public institutions where wide and efficient access is essential but wall space is limited.

The global Automatic Telescopic Door market size was estimated at USD 1085.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
