## Abstracts

Automatic Temporary Bonding Systems refer to advanced manufacturing technologies that utilize automated processes to create temporary bonds between materials or components during the fabrication process. These systems are designed to enhance production efficiency, improve product quality, and reduce manual labor costs. By employing automated machinery and precision control mechanisms, ATBS are able to apply the necessary bonding force and materials with high accuracy and consistency. Temporary bonding is often used in semiconductor manufacturing, microelectronics assembly, and other high-tech industries where precise alignment and positioning of components are crucial. ATBS enable the rapid and reliable formation of these temporary bonds, which can then be replaced with permanent bonds during subsequent stages of production.

The global Automatic Temporary Bonding Systems market size was estimated at USD 328.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
