## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automatic Thermal Paper Slitting Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of automatic thermal paper slitting machines reached 52,000 units, with an average selling price of US\$8,600. Automatic thermal paper slitting machines are processing equipment used to cut wide-width thermal base paper into rolls of specified sizes at high speed and precision. Typical processing speeds are 120-180 m/min, and they are suitable for the production of POS paper, receipt paper, and label substrates. Their global total capacity is approximately 78,000 units per year, with a gross profit margin typically between 22% and 28%. Upstream raw materials mainly include carbon steel plates, aluminum profiles, bearings, servo motors, PLCs, and electronic control components. The material consumption per unit is approximately 320 kg of metal parts and US\$180 worth of electronic components. Downstream, they primarily serve thermal paper mills, label factories, and printing supply companies, with each unit corresponding to an annual paper roll processing capacity of approximately 380-520 tons. Demand growth is driven by retail receipts, logistics labels, and medical printing consumables. Business opportunities are concentrated in upgrades to high-speed, fully automated correction, intelligent metering, and energy-saving drive modules, as well as the trend of shifting new production capacity to the Middle East and Southeast Asia.

The global Automatic Thermal Paper Slitting Machine market size was estimated at USD 447.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
