## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automatic Timekeeping Watch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automatic Timekeeping Watch production reached approximately 107.3 K units, with an average global market price of around US\$ 582.6 per unit. An Automatic Timekeeping Watch is a type of advanced wristwatch designed to maintain precise time without requiring manual adjustment by the wearer, as it automatically synchronizes its displayed time through external signals or digital connections. Unlike traditional mechanical or quartz watches that may gradually drift from accuracy, automatic timekeeping watches integrate technologies such as radio-controlled synchronization, GPS satellite reception to ensure high precision across different time zones and environments. These watches are particularly valued for their convenience, reliability, and global functionality, as they eliminate the need for frequent resetting while providing features such as automatic daylight saving adjustments, perpetual calendar accuracy, and seamless time correction during travel. This makes them popular among frequent travelers, professionals who rely on precise timekeeping, and watch enthusiasts who appreciate the fusion of traditional craftsmanship with modern smart synchronization technologies. The supply chain of an Automatic Timekeeping Watch involves upstream suppliers of raw materials and electronic components such as stainless steel, sapphire crystal, movement parts, GPS/radio modules, and Bluetooth chips; midstream manufacturers that design, assemble, and integrate precision movements with automatic time synchronization technologies; and downstream distributors, retailers, and e-commerce platforms that deliver finished watches to global consumers including travelers, professionals, and watch enthusiasts. The single-line production capacity of Automatic Timekeeping Watch is 26

to 31 K units per year, the average gross profit margin was 52.3%.

The global Automatic Timekeeping Watch market size was estimated at USD 62.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
