Abstracts

Automatic tolerance annotation is a professional service developed based on computer-aided design (CAD), artificial intelligence (AI), and image recognition technologies. It is designed to automatically identify, annotate, and verify key information such as dimensions, tolerances, and geometric features in mechanical parts, industrial design drawings, or 3D models. This service enables standardized annotation of drawings or 3D models, reduces human error, expedites design review and production preparation processes, and ensures the consistency and traceability of design data throughout manufacturing, assembly, and quality inspection. Automatic tolerance annotation is widely used in industries such as machinery manufacturing, aerospace, automotive parts, precision instruments, and mold design, and is a key technological tool for promoting digital and intelligent design. The downstream customers of this service primarily include machinery manufacturers, automobile and parts manufacturers, aerospace and shipbuilding companies, precision instrument and mold design companies, and various industrial design and engineering consulting firms. These downstream customers use this service to automatically annotate and verify CAD drawings or 3D models to improve design efficiency, reduce human error, optimize production preparation processes, and ensure consistency and traceability during part processing, assembly, and quality inspection. Downstream customers typically focus on service accuracy, compatibility, processing speed, and integration with existing CAD or PLM systems. The gross profit margin for automated tolerance annotation services is 68%.
