Abstracts

The automatic toothbrush making machine is an advanced, highly automated manufacturing machine designed to streamline the production of toothbrushes. Some automatic toothbrush manufacturing machines are single-function and can only fulfill the toothbrush flocking function. Some integrate multiple processes, starting with the injection molding of the toothbrush handle, usually using a high-speed, precise plastic injection system. It then automatically inserts the bristles into the handle with mechanics that control the density, length and alignment of the bristles to meet different product specifications. Some models also feature the ability to add add-on components such as rubber handles or decorative elements. Operating with minimal human intervention, this machine ensures high volume production while maintaining consistent quality, thus significantly improving efficiency and productivity in the toothbrush manufacturing industry.

The global Automatic Toothbrush Making Machine market size was estimated at USD 392.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
