Abstracts

An automatic tracking camera is an advanced imaging device equipped with computer vision, artificial intelligence, and sensor technologies that autonomously identifies, locks onto, and follows moving subjects?such as people, vehicles, or objects?without manual intervention. These cameras utilize algorithms for object detection, motion prediction, and real-time adjustments to pan, tilt, and zoom, ensuring the subject remains centered and in focus. Commonly integrated with features like facial recognition, gesture control, and multi-subject tracking, they are widely used in applications ranging from live broadcasting, sports analysis, and video conferencing to security surveillance, streaming, and educational content creation. By automating the filming process, they enhance operational efficiency, reduce human error, and enable dynamic, high-quality video capture in environments where movement is constant or unpredictable.
