Report Overview

Automatic wafer cleaning machine is a specialized equipment used in the semiconductor manufacturing industry to clean semiconductor wafers before or after various processing steps. Semiconductor wafers are thin slices of semiconductor material (such as silicon) used as the foundation for manufacturing integrated circuits and other microelectronic devices. The wafer cleaning process is critical to ensure the quality and reliability of semiconductor devices. During wafer fabrication, contaminants, particles, and residues can accumulate on the wafer surface, affecting the performance and yield of the final semiconductor devices. The automatic wafer cleaning machine is designed to remove these contaminants and particles, providing a clean surface for subsequent processing steps.
