Abstracts

An ?automatic watch winder?, also known as a power watch box or watch winder, is a device specifically designed for self-winding mechanical watches. Its main function is to wind the watch through automatic rotation when the user does not use the watch for a long time, thereby preventing the watch from losing power due to long-term stoppage and ensuring the normal operation of the watch. Automatic watch winders have a built-in mechanical motor, usually powered by a battery or external power source. The user can put the watch into the rotating cup in the winding box and fix it. After adjusting the speed program, the motor will automatically rotate and the watch will be wound through the automatic winding mechanism of the watch.
