Report Overview

An automatic lubrication system (ALS), often referred to as a centralized lubrication system, and is a system that delivers controlled amounts of lubricant to multiple locations on a machine while the machine is operating. Even though these systems are usually fully automated, a system that requires a manual pump or button activation is still identified as a centralized lubrication system.

The market trend is to move from manual solutions to automatic and centralized lubrication systems, this drives market growth above the underlying market growth. Large industrial processing equipment in the cement, mining and mineral processing, steel and paper industries accounts for almost 50% of global demand, while vehicles – agricultural, mobile mining and construction, trucks and trailers – and industrial machines, such as machine tools and printing machines, each account for around 25% of the market. By region, European markets account for about 32%, North and Latin America together make up about 35%, and Asia and the rest of the world account for 33%.
