Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automobile Brake Pad competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Automotive Brake Pads production reached approximately 923.7 million sets, with an average global market price of around US\$ 18 per set. Brake Pads are components of brake systems used in automotive and other applications. Brake pads are friction materials which bound to the surface that faces the brake rotor and take the brunt of the frictional force necessary to stop the car. In a disc brake system, the brake pedal activates a hydraulic line which squeezes the calipers against the rotors of the car's tires. Pads are positioned between the calipers and the rotors to absorb the energy and heat, and then provide enough grips to stop the car. In this report, we only count brake pads, not brake shoes. The main difference between brake pads and brake shoes is: The brake shoes are a component of the drum brake system in a vehicle. They are made of a tough, heat-resistant material and are attached to the brake drum. Brake pads are a component of the disc brake system. They are the part that comes into contact with the brake rotor to slow or stop a vehicle. Note: In the report, one unit Brake Pad represents Four pieces of Brake Pads. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries

include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

The global Automobile Brake Pad market size was estimated at USD 16763.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.10% during the forecast period.
