Abstracts

Automobile Carburetor is the device inside an internal combustion engine that provides the area for air and gasoline to mix them together so that the engine runs properly. If there is not enough fuel mixed with the air, the engine 'runs lean' and either will not run or potentially damages the engine. If there is too much fuel mixed with the air, the engine 'runs rich' and either will not run (it floods), runs very smoky, runs poorly (bogs down, stalls easily), or at the very least wastes fuel.

The global Automobile Carburetor market size was estimated at USD 1283.18 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -0.03% during the forecast period.
