## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automobile ICP Accelerometers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Automobile ICP (Integrated Circuit Piezoelectric) accelerometers are high-precision sensors designed to measure dynamic acceleration, vibration, and impact forces in vehicles under various operating conditions. They utilize piezoelectric elements to convert mechanical vibrations into electrical charges, which are then conditioned by built-in microelectronic circuits to provide low-impedance outputs. This ensures stable signal transmission over long cables with minimal interference. ICP accelerometers are widely used in vehicle dynamics testing, NVH (Noise, Vibration, and Harshness) analysis, crash testing, suspension tuning, and durability studies. In 2024, global Automobile ICP Accelerometers production reached approximately 25 k units, with an average global market price of around US\$ 540 per unit.

The global Automobile ICP Accelerometers market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
