Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automobile Maintenance Fluids competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Automobile maintenance fluids refer to various lubricating, cooling, cleaning and transmission fluids that need to be regularly checked, replaced or supplemented during the daily maintenance of the car, mainly including engine oil, transmission oil, brake oil, antifreeze (coolant), power steering fluid and windshield washer fluid, etc. These fluids play a vital role in ensuring the normal operation of the engine and various systems, extending the service life of the vehicle and improving driving safety. As the number of cars in the market continues to rise, consumers are paying more and more attention to car maintenance, and oil maintenance is changing from "passive maintenance" to "active management". More and more car owners regularly replace engine oil, brake oil, antifreeze, etc., pay attention to maintenance cycles and oil quality, reflecting the change from "car repair" to "car maintenance". At the same time, oil consumption is also showing a trend of branding and specialization. Users' requirements for quality, performance, and safety are constantly increasing. They no longer only focus on price, but tend to choose well-known brands, original factory standards or vehicle-specific products, which puts higher demands on the company's technical strength and brand trust. The rapid popularization of new energy vehicles is reshaping the oil market. Although the demand for traditional engine oil has declined, the demand for new oils such as motor coolant and reducer oil is growing, which has brought new technical challenges and market growth points to the industry, and forced traditional oil manufacturers to accelerate product transformation and upgrading. In addition, the integration of "product + service" has become a new direction for the development of the industry. Many companies have shifted from selling oil

products to providing integrated services such as door-to-door maintenance, membership customization, and oil monitoring to improve user stickiness and form a differentiated competitive advantage. Service experience is gradually becoming an important factor for users to choose brands. Finally, environmental protection laws and regulations are also driving the industry to transform towards green and sustainable development. Low-volatility, low-pollution, recyclable environmentally friendly lubricants and antifreeze are gradually becoming the new favorites of the market. Green products and sustainable service models will occupy a more important position in the future oil market.

The global Automobile Maintenance Fluids market size was estimated at USD 771.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
