Abstracts

An automobile supercharger is a forced induction device that compresses the air entering an engine's combustion chamber, thereby increasing the density of the air-fuel mixture and enabling more power to be generated per engine cycle. Unlike turbochargers, which are driven by exhaust gases, superchargers are mechanically powered by the engine's crankshaft, typically via a belt, resulting in immediate power delivery with minimal lag. These systems are commonly used in performance, racing, and high-output vehicles to enhance horsepower and torque, and they come in various types—such as roots-type, centrifugal, and twin-screw designs—each offering distinct advantages in efficiency, packaging, and performance characteristics.

The global Automobile Supercharger market size was estimated at USD 427.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
