Abstracts

Automobile surface coating refers to the application of protective and aesthetic layers to vehicle exteriors, primarily through paints, clear coats, sealants, and ceramic or graphene-based nano-coatings. These products are engineered to shield automotive surfaces from environmental damage?including UV radiation, acid rain, oxidation, and minor scratches?while enhancing visual appeal through gloss, color retention, and hydrophobic properties. The coatings vary in composition and durability, ranging from traditional solvent-based systems to advanced waterborne and powder coatings that comply with environmental regulations, with high-performance ceramic variants offering long-term protection through chemical bonding with the paint surface.

The global Automobile Surface Coating market size was estimated at USD 12340.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
