Abstracts

Automotive Tire is a ring-shaped component that surrounds a wheel's rim to transfer a vehicle's load from the axle through the wheel to the ground and to provide traction on the surface traveled over. Most tires are pneumatically inflated structures, which also provide a flexible cushion that absorbs shock as the tires rolls over rough features on the surface. Tires provide a footprint that is designed to match the weight of the vehicle with the bearing strength of the surface that it rolls over by providing a bearing pressure that will not deform the surface excessively.

The global Automobile Tire market size was estimated at USD 135540.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.05% during the forecast period.
