Abstracts

The automobile towing chain is a critical component of vehicle recovery and roadside assistance systems, designed to facilitate the safe and efficient towing or pulling of disabled or immobilized vehicles by connecting them to a towing vehicle or winch. Typically constructed from high-strength alloy steel with welded or forged links, these chains are engineered to withstand significant tensile loads while resisting deformation, abrasion, and environmental corrosion. They are available in various grades, load capacities, and configurations?such as grade 70 transport chains or grade 80/100 for heavy-duty applications?and often feature safety hooks, grab hooks, or clevis attachments for secure connections. Compliance with industry standards (e.g., ASME B30.26, DIN 5685) and certifications (like OSHA or CE marking) is essential to ensure reliability, user safety, and legal adherence in both consumer and commercial contexts, including automotive repair, off-road recovery, construction, and agricultural sectors.

The global Automobile Towing Chain market size was estimated at USD 350.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.15% during the forecast period.
