Report Overview

The automobile activated carbon air conditioning filter is a filter installed in the automobile air conditioning system. Its main feature is that it contains activated carbon. The function of this filter is to filter particles, dust, pollen, mold, odors and harmful gases in the air, thereby improving the air quality in the car and keeping the interior environment clean and comfortable. Activated carbon is a porous carbon material with strong adsorption capacity. The activated carbon contained in the car's activated carbon air conditioning filter can absorb odors and harmful gases in the air, such as car exhaust, formaldehyde, benzene, sulfur dioxide, etc., thereby purifying the air in the car and protecting the health of passengers. This kind of filter is usually installed at the air inlet of the car's air conditioning system and filters the air entering the car. Regularly replacing the car's activated carbon air conditioning filter can keep the air in the car fresh and effectively extend the service life of the air conditioning system.
