Abstracts

Automotive Active Noise Control (ANC) is a technology used in vehicles to reduce unwanted cabin noise by generating sound waves that are out of phase with the noise, effectively canceling it out. Using microphones, sensors, and digital signal processors, the system detects engine, road, or wind noise and emits anti-noise through the car's speakers to neutralize it in real time. This enhances passenger comfort and allows automakers to use lighter, less bulky sound insulation materials, improving fuel efficiency. ANC is commonly found in luxury and electric vehicles, where quietness is a key aspect of the driving experience.

The global Automotive Active Noise Control market size was estimated at USD 815.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
