Abstracts

An automotive ad converter, also known as an automotive video interface or multimedia interface module, is an electronic device designed to integrate aftermarket multimedia systems?such as Apple CarPlay, Android Auto, or standalone infotainment displays?into vehicles that originally lacked native support for these features. It functions by intercepting and converting signals between the vehicle?s factory head unit and the new multimedia source, enabling functionalities like touchscreen control, audio playback, navigation, and smartphone mirroring without requiring complete replacement of the OEM system. These converters are particularly relevant for older car models or base trims, bridging compatibility gaps and modernizing in-car entertainment and connectivity while preserving factory features like steering wheel controls and rear-view camera integration.

The global Automotive Ad Converter market size was estimated at USD 750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
