### Report Overview

Adhesives, or glue, cement, mucilage or paste is any organic or inorganic chemical substance, which is applied on one of the surfaces or both surfaces which are meant to be joined together. Adhesives can be found naturally or can be manufactured synthetically. The application or use of adhesives confer numerous advantages to the final product over binding techniques such as thermal bonding, mechanical fastening, and sewing, and others. Apart from this, some of the essential properties of these adhesives include its ability to efficiently distribute the stress across the joint, bind different types of materials together, and enhance design flexibility of the final product. Sealants, unlike adhesives is a substance that is used to block the passage of fluids through the joints or openings in the structure. They can be permanent or temporary, weak or strong, flexible or rigid depending on the type. Some sealants possess adhesive qualities, which are commonly known as structural sealants, or adhesive-sealants. The automotive industry is increasingly making use of automotive adhesives & sealants in vast applications including interior, exterior, under the hood parts, and embedded systems among others.
