Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Automotive Air-Conditioning Electric Compressors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global automobile air-conditioning compressor production reached approximately 31,460.1 k units, with an average global market price of around US\$ 201 per unit. The automobile air-conditioning compressor is the heart of the automobile air-conditioning refrigeration system, which plays a role in compressing and transporting refrigerant vapor. The scroll compressor is composed of an end plate and involute scroll teeth extending from the end plate. It has many advantages. For example, the compressor is small in size and light in weight, and the eccentric shaft driving the moving turbine can rotate at a high speed. Because the scroll compressor can operate reliably without the suction valve and the exhaust valve, and it is easy to realize variable speed movement and variable displacement technology. Multiple compression chambers work simultaneously and the gas pressure difference between adjacent compression chambers is small so that the gas leakage is small. Automotive air conditioning electric compressors are devices that compress and circulate refrigerant to cool the passenger cabin and are powered by the vehicle's DC (Direct Current) electrical system, unlike traditional belt-driven compressors. They are a popular choice for modern hybrid and electric vehicle due to their high efficiency, low noise, stable operation, and reduced engine load. The automotive air-conditioning electric compressor market has witnessed significant growth over the years, driven by various dynamics in the automotive and HVAC industries. With the growing demand for energy-efficient and eco-friendly air-conditioning systems in vehicles, automotive air-conditioning electric compressors are becoming a preferred choice over traditional belt-driven compressors.

These compressors, powered by electric motors, have the advantage of being more energy-efficient, reliable, and compact, making them highly suitable for electric vehicles (EVs) and hybrid vehicles (HEVs). The shift towards EVs and increasing environmental regulations have further accelerated the growth of the automotive air-conditioning electric compressor market. This growth is attributed to the increasing demand for electric and hybrid vehicles, which require electric compressors for their air-conditioning systems. The growth of the EV market, coupled with stringent regulations aimed at reducing carbon emissions, is expected to significantly impact the market dynamics of automotive air-conditioning electric compressors. Advancements in compressor technology, such as the development of variable speed compressors and enhanced refrigerant systems, are also shaping the market's future.

Market Drivers One of the primary drivers of the automotive air-conditioning electric compressor market is the increasing demand for electric vehicles (EVs). As consumers shift towards EVs due to environmental concerns and government incentives, the demand for energy-efficient components, including electric air-conditioning compressors, has surged. Traditional internal combustion engine (ICE) vehicles use belt-driven compressors, which are less efficient and rely on the engine's power. In contrast, electric compressors provide superior efficiency by drawing power from the vehicle's battery, making them ideal for EVs and hybrid vehicles. This exponential growth of electric vehicles is a significant driver for the automotive air-conditioning electric compressor market, as these vehicles require specialized air-conditioning systems that can operate efficiently with electric power sources. Additionally, regulatory bodies across the globe are introducing strict environmental regulations, such as the European Union's Green Deal, which aims to make the EU climate-neutral by 2050. These regulations are pushing automakers to adopt sustainable technologies, including electric compressors, to comply with stringent emission standards.

Market Restraints Despite the strong growth prospects, there are several restraints that could limit the growth of the automotive air-conditioning electric compressor market. One of the primary challenges is the high initial cost of electric compressors compared to traditional mechanical compressors. The upfront cost of electric compressors, along with the need for specialized components and systems to integrate them into vehicles, can make them more expensive to produce and install. This could deter some automakers from adopting this technology, particularly in budget-friendly models. The development of electric compressors requires significant investment in research and development, as well as advanced manufacturing capabilities. Small-scale manufacturers, especially in emerging economies, may struggle to adopt and produce these compressors due to financial constraints. The adoption of electric compressors is also dependent on the availability of infrastructure to support electric vehicles, including charging stations and maintenance facilities, which could slow down the adoption rate in regions with less developed infrastructure. These

factors collectively represent significant challenges for the market's growth. **Market Opportunities** One of the key opportunities in the automotive air-conditioning electric compressor market lies in the growing demand for hybrid electric vehicles (HEVs) and fully electric vehicles (EVs). As governments worldwide continue to introduce incentives to promote electric mobility, such as tax breaks, rebates, and subsidies, consumers are increasingly opting for vehicles with electric drivetrains. Global key players of Automotive Air-Conditioning Electric Compressor include Toyota Industries, Hanon Systems, FinDreams (BYD), Aotecar, Sanden HASCO, MAHLE, Sanden, Zhongcheng New Energy, Valeo, Brose, Weiling Auto Parts (Media), Shanghai Highly, Shanghai Velle (Huayi), Xingtai Guiyou New Energy, Yuebo Auto, SONGZ, Yinhe Electronics, Shanghai Benling, Chongqing Jianshe, Mitsubishi, Panasonic, TOMPRESS, Guangdong Posung New Energy, Yinmao Holding Group, Shanghai Guangyu, Sichuan TianQuan, Suzhou Wise Drive, Hunan Malgoo Technology, Hunan CBET New Energy Technology, etc. In 2024, the world's top five vendors accounted for approximately 70% of the revenue. Asia-Pacific is the largest market, has a share about 68%, followed by Europe and Americas, with share 20% and 10%, separately.

The global Automotive Air-Conditioning Electric Compressors market size was estimated at USD 6321.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.80% during the forecast period.
