Abstracts

Automotive air springs are pressurized rubber and fabric bellows that replace conventional steel coil or leaf springs in a vehicle's suspension system, utilizing compressed air to provide adjustable ride height, load-leveling capabilities, and improved ride comfort by dynamically responding to road conditions and vehicle load changes. These components are integral to advanced suspension setups, including air suspension systems in luxury passenger vehicles, commercial trucks, buses, and specialty applications such as emergency vehicles and luxury RVs, where they enable features like self-leveling, enhanced stability, and the ability to raise or lower the chassis for improved aerodynamics, accessibility, or off-road performance.
