Report Overview

Airbags are automotive safety features in vehicles that are engineered to inflate at a rapid speed during the event of an accident or crash. The inflated airbags help in protecting the in-vehicle occupants in such occurrences. Therefore, these devices are categorized under automotive passive safety features. There are various types of airbags based on their application in vehicles, such as frontal airbags, side airbags, curtain airbags, and seatbelt airbags. The names of these airbags are associated with their strategic placements inside the vehicle.

In several developing economies such as China, India, and Brazil, the use of curtain airbags is restricted to the luxury and mid-premium passenger car segments. However, with the increasing focus on passenger safety and the rising awareness of the usage of curtain airbags, the demand for the installation of these devices in low-cost and compact vehicles will increase as well. For instance, Ford India has already started installing six air bags, including curtain and frontal airbags, in their low-cost models such as Aspire and Figo.
