Abstracts

The automotive airbag module is a critical safety system component designed to deploy rapidly in the event of a collision, providing cushioning and restraint to reduce injury to vehicle occupants; it typically consists of an airbag cushion, an inflator unit that generates gas to fill the cushion, sensors that detect impact severity and location, and an electronic control unit (ECU) that processes sensor data and triggers deployment when necessary. These modules are integrated into various locations within a vehicle—such as the steering wheel, dashboard, doors, seats, and pillars—to protect against frontal, side, and rollover impacts, with advanced systems incorporating multi-stage inflation and adaptive deployment strategies based on crash severity, occupant position, and seatbelt usage to optimize protection while minimizing risk.

The global Automotive Airbag Module market size was estimated at USD 23500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
