Report Overview

Airbag sensors are responsible for detecting sudden deceleration in a collision. It sends a signal to the airbag control unit which use the vehicle speed, yaw, seat belt and ECU to determine if an airbag should deploy in a crash. Sensors are used for detecting and responding to electrical or optical signals. A sensor converts physical elements (such as temperature, blood pressure, humidity, and speed) into an electrical form, which is easy to measure. They measure physical properties of the environment such as temperature, weight, size, and luminance. Sensors are classified based on the elements they detect and measure. They are basically divided into two types namely: Active sensors and passive sensors. Other common types of sensors are mechanical, electrical, radiation, magnetic, and chemical.
