Abstracts

Automotive airbag yarn is a specialized high-tenacity textile material engineered from synthetic fibers, primarily nylon 6.6 or polyester, designed to meet stringent performance and safety standards for use in airbag cushions. These yarns must exhibit exceptional tensile strength, thermal resistance, controlled air permeability, and minimal elongation to ensure rapid and reliable inflation and cushioning during a collision, while also being lightweight, packable, and resistant to aging, chemicals, and abrasion over the vehicle's lifespan. The manufacturing process involves precision spinning, drawing, and texturing to achieve the required properties, followed by coating or finishing treatments to optimize performance, with quality rigorously tested against automotive industry specifications such as those from OEMs and global safety organizations.

The global Automotive Airbag Yarn market size was estimated at USD 1615.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.65% during the forecast period.
