Report Overview

An airbag is a vehicle occupant-restraint system using a bag designed to inflate extremely quickly, then quickly deflate during a collision. It consists of the airbag cushion, a flexible fabric bag, an inflation module, and an impact sensor. The purpose of the airbag is to provide a vehicle occupant a soft cushioning and restraint during a crash event. It can reduce injuries between the flailing occupant and the interior of the vehicle. The airbag provides an energy-absorbing surface between the vehicle's occupants and a steering wheel, instrument panel, body pillar, headliner, and windshield. Modern vehicles may contain multiple airbag modules in various configurations, including, driver, passenger, side-curtain, seat-mounted side-impact, knee bolster, inflatable seat belt, front right- and left-side sensor, and pedestrian airbag modules.
