Abstracts

Automotive all-season tires are a category of tires engineered to provide adequate performance across a wide range of weather conditions, including dry, wet, and light winter environments. These tires are designed with specialized rubber compounds that remain flexible in colder temperatures and tread patterns that balance water evacuation for wet traction with sufficient grip on dry surfaces. As a versatile and convenient solution for drivers in regions with moderate climates, all-season tires eliminate the need for seasonal tire changes, offering a compromise between the specialized capabilities of dedicated summer or winter tires and year-round usability. They represent the most popular tire category in many markets due to their broad applicability and suitability for everyday driving needs.

The global Automotive All Season Tires market size was estimated at USD 61250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
