Report Overview

Alternators are one of the most vital components of an automotive charging system. The other components of automotive charging systems are the battery and the voltage regulator. Vehicles are equipped with many electrical and electronic components, which are powered by the coordinated arrangement of the battery and alternator. Automotive alternators generate alternating current through electromagnetism; the electricity that is generated in an alternator is channeled to the battery, which assists in running several electrical systems. There are two types of alternator: three-phase alternators and single-phase alternators. The type of alternator that is used in a passenger car depends on how it is manufactured.

One of the primary drivers for this market is the exponentially increasing sales of passenger cars. The sale of passenger cars is directly correlated with the market growth of automotive alternators as all passenger cars are equipped with alternators. The passenger cars segment contributes to the majority share in the automotive alternator market. In 2015, SUVs and crossovers accounted for the majority of the sales in the Chinese and the European passenger cars market. Increasing preference for fuel efficiency and the comfort of traveling in three-row seats in crossovers and SUVs are the main drivers for the growth of the SUVs and crossovers market in several countries across the globe. Moreover, the lowering interest rates on car loans in countries like the US and Canada is expected to further propel the growth of the automotive alternator market during the forecast period.
