Abstracts

The automotive automatic clutch, also known as an automated manual transmission (AMT) or clutch-by-wire system, is an electronically controlled mechanism that automates the operation of the clutch pedal in manual transmission vehicles, enabling gear shifts without driver intervention while retaining the mechanical efficiency and cost-effectiveness of a traditional manual gearbox. It utilizes sensors, actuators, and an electronic control unit (ECU) to interpret driver inputs such as throttle position, engine speed, and gear selection and disengage or engage the clutch smoothly during acceleration, deceleration, or gear changes, thereby reducing driver effort, minimizing human error in clutch modulation, and improving drivability in stop-and-go traffic, while often offering features like creep function, hill-hold assist, and manual override modes for enhanced flexibility.

The global Automotive Automatic Clutch market size was estimated at USD 1280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
