AUTOSAR (AUTomotive Open System ARchitecture) middleware is a standardized software layer designed to enable interoperability, scalability, and reusability in automotive embedded systems. Positioned between the application layer and the hardware abstraction, the middleware provides essential services such as communication, diagnostics, memory management, and task scheduling. By decoupling application software from hardware-specific implementations, AUTOSAR middleware allows developers to integrate components from different suppliers more efficiently, accelerate development cycles, and ensure compliance with industry safety and reliability standards, making it a cornerstone in modern vehicle software architectures. Currently, most AUTOSAR middleware is customized, and the prices of AUTOSAR middleware with different requirements and functions vary greatly.

The global Autosar Middleware market size was estimated at USD 1552.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.10% during the forecast period.
