Abstracts

The automotive AVM (Around View Monitor) controller is a sophisticated electronic control unit that processes and synthesizes input from multiple vehicle-mounted cameras—typically positioned on the front, rear, and sides—to generate a real-time, composite 360-degree bird’s-eye view of the vehicle’s surroundings, which is displayed on the infotainment screen to assist drivers during low-speed maneuvers, parking, and navigating tight spaces. It acts as the central intelligence for AVM systems, integrating camera feeds, applying distortion correction and stitching algorithms, and often incorporating features such as dynamic guidelines, object detection, and integration with other Advanced Driver Assistance Systems (ADAS) to enhance situational awareness, reduce blind spots, and mitigate collision risks.

The global Automotive Avm Controller market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
