Abstracts

Automotive air quality sensors are used to keep track and monitor the quality of air inside the vehicle cabin. There has been a considerable reduction in the cabin emissions with the effective use of automotive cabin air quality sensors in the global market. Furthermore, requirement of enhanced air quality inside the vehicle has backed the growth of automotive cabin air quality sensors market. Driver and the vehicle passengers are often exposed to high level of hazardous pollutants and gases, especially in today's urban areas and cities where the pollution level has reached to an alarming limit. Likewise, growing exhaust emissions coupled with the increasing wear particles make the passengers more vulnerable to the interior pollution. The rising interior emission of hazardous pollutants has led to significant increase in respiratory problems among the consumers. With the use of effective filtration systems combined with a cabin air quality sensor, entry or inflow of foreign particles such as pollen grains, road dust, diesel soot, etc. can be reduced inside the vehicle. Road safety and growing pollution is one of the protuberant issues at the present time and it is estimated to be in the future as well. Digital automotive electronics such as automotive cabin air quality sensor is proficient enough to automate several driving aspects which can reduce significant cabin pollutants and improve vehicle safety. Automotive cabin air quality sensor is one of the key expansion in this area and is an advancing step for increasing the driving security and safety in the global automotive market.

The global Automotive Cabin Air Quality Sensor market size was estimated at USD 136.7 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
