The automotive Controller Area Network (CAN) interface IC is a specialized integrated circuit that facilitates communication between electronic control units (ECUs) within a vehicle's network by implementing the CAN protocol, which standardizes data exchange for functions such as engine management, braking systems, infotainment, and advanced driver-assistance systems (ADAS). These ICs translate signals between microcontrollers and the physical CAN bus, ensuring reliable, real-time, and error-resistant data transmission in the electrically noisy automotive environment, and they often include features like bus fault protection, low-power modes, and compatibility with various CAN standards such as CAN FD (Flexible Data-Rate) to meet increasing bandwidth demands.

The global Automotive Can Interface Ic market size was estimated at USD 720.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
